EXAMINER'S AMENDMENT

Election/Restrictions

Applicant's election without traverse of Group VII, claims 34, 36, 40, and 41 in the reply filed on 10/12/04 is acknowledged. In light of the search and examination of the elected invention, the restriction requirement issued by the previous examiner has been reconsidered. It is noted that the inventions of Groups VII and Group VIII are linked by allowable claim 34, therefore the restriction between these two groups has been withdrawn and claims 34-41 have been searched, examined, and determined to be allowable after the instant examiner's amendment.

Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the title:

The title has been replaced with the following:

-- Method for identifying a test compound that modulates expression of a Fra-1 gene in a brain cancer cell --

In the claims:

This application is in condition for allowance except for the presence of claims 1-33 and 42-47 to inventions non-elected without traverse. Accordingly, claims 1-33 and 42-47 have been cancelled.

The following is an examiner's statement of reasons for allowance:

The closest prior art is Taylor et al (U.S. Patent No. 6,124,133) and Bhattacharya et al (Applicant reference indicated as AA by the examiner in the IDS). Taylor et al teach an assay to detect modulation of fra-1 expression by an antisense compound by assaying for the effect of the compound on fra-1 expression in cells (Example 10). This reference also teaches the role of fra-1 in various cancers (columns 1-2), but the reference fails to specifically teach the role of fra-1 in brain cancer, or brain cancer cells that express fra-1 higher than normal brain cells, or to specifically teach the use of brain cancer cells that express fra-1 in assays for compounds that modulate fra-1 expression. Battacharya et al teach that fra-1 is detectable in a nuclear protein complex that binds to an AP-1 site that plays a major role in uPAR promoter activity in glioblastoma cells (abstract). However, this reference fails to teach that glioblastoma cells express more fra-1 than normal brain cells. This reference also fails to suggest that fra-1 expression might be involved in cancer regulation in the glioma cell. Therefore, these two references, together with or without any other prior art, fail to anticipate or render obvious the claimed invention because there would have been no reasonable

Art Unit: 1636

expectation of success that brain cancer cells express fra-1 and there would have been no motivation to assay for fra-1 expression in brain cancer cells as a part of a method for identifying a test compound that modulates expression of the fra-1 gene.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
